

Sani[™]

UV-C for what you don't see

SANI Water Sanitation (Submersible)

Water used for drinking or within the food industry requires us to obtain info on where the water is from and how much is stored or used. Sending us a water analysis helps us understand the quality of your water so we can supply a solution.

Water JoJo, Roto or storage

SANI Submersible units are really easy to install and filtration of your water is a general requirement to allow the UV-C to deactivate pathogens without dealing with particulates.

UV-C for what you don't see

Technical Details

- Model 55 W
- Input 220V
- Ampere 0.3A
- Frequency 50Hz
- Minimum volume 2000 L per hour hour
- Dimensions 1m
- Enclosure Quarts sleeve
- Source UV-C 253.7nm germicidal

Applications

- Sanitize water within tanks
